## List of Tables

1	SVI Descriptive Statistics . . . . .	4
2	Descriptive Statistics . . . . .	5
3	SPX <sub>CPV</sub> In-Sample Regression Coefficients . . . . .	11
4	SPX <sub>CPV</sub> Out-of-CPV-Sample Regression Coefficients . . . . .	13
5	SPX Out-of-Sample Recursive Variance Forecast (using $\Delta SVI^{SPX_{CPV}}$ ) Error Statistics	19
6	SPX Out-of-Sample Positive Excess Return Probability Forecast (using $\Delta SVI_{CPV}$ ) Error Statistics . . . . .	19

## List of Figures

1	Cumulative Returns of an Agent Investing as per Strategies with the SPX for $\psi = 0.49$	6
2	Cumulative Returns of an Agent Investing as per Strategies with the SPX for $\psi = 0.495$	7
3	Cumulative Returns of an Agent Investing as per Strategies with the SPX for $\psi = 0.5$	8
4	Cumulative Returns of an Agent Investing as per Strategies with the SPX for $\psi = 0.505$	9
5	Cumulative Returns of an Agent Investing as per Strategies with the SPX for $\psi = 0.51$	10
6	Cumulative Returns of an Agent Investing as per Strategies with the SPX as per the $\Delta SVI_{CPV}$ data over the out-of-CPV-sample for $\psi = 0.49$ . . . . .	14
7	Cumulative Returns of an Agent Investing as per Strategies with the SPX SPX as per the $\Delta SVI_{CPV}$ data over the out-of-CPV-sample for $\psi = 0.495$ . . . . .	15
8	Cumulative Returns of an Agent Investing as per Strategies with the SPX as per the $\Delta SVI_{CPV}$ data over the out-of-CPV-sample for $\psi = 0.5$ . . . . .	16
9	Cumulative Returns of an Agent Investing as per Strategies with the SPX as per the $\Delta SVI_{CPV}$ data over the out-of-CPV-sample for $\psi = 0.505$ . . . . .	17
10	Cumulative Returns of an Agent Investing as per Strategies with the SPX as per the $\Delta SVI_{CPV}$ data over the out-of-CPV-sample for $\psi = 0.51$ . . . . .	18
11	Cumulative Returns of Active Investment Strategy Following the C&D <sub>GARCH</sub> strategy for $0 \leq \psi \leq 1$ . . . . .	20
12	Cumulative Returns of Active Investment Strategy Following the C&D <sub>GARCH</sub> strategy for $0.45 \leq \psi \leq 0.6$ . . . . .	20
13	Cumulative Returns of Active Investment Strategy Following the C&D <sub>GARCHSVI</sub> strat- egy for $0 \leq \psi \leq 1$ . . . . .	21
14	Cumulative Returns of Active Investment Strategy Following the C&D <sub>GARCHSVI</sub> strat- egy for $0.45 \leq \psi \leq 0.6$ . . . . .	21
15	Cumulative Returns of Active Investment Strategy Following the C&D <sub>GJRGARCH</sub> strat- egy for $0 \leq \psi \leq 1$ . . . . .	22
16	Cumulative Returns of Active Investment Strategy Following the C&D <sub>GJRGARCH</sub> strat- egy for $0.45 \leq \psi \leq 0.6$ . . . . .	22
17	Cumulative Returns of Active Investment Strategy Following the C&D <sub>GJRGARCHSVI</sub> strategy for $0 \leq \psi \leq 1$ . . . . .	23

18	Cumulative Returns of Active Investment Strategy Following the C&D <sub>GJRGARCHSVI</sub> strategy for $0.45 \leq \psi \leq 0.6$ . . . . .	23
19	Cumulative Returns of Active Investment Strategy Following the C&D <sub>EGARCH</sub> strategy for $0 \leq \psi \leq 1$ . . . . .	24
20	Cumulative Returns of Active Investment Strategy Following the C&D <sub>EGARCH</sub> strategy for $0.45 \leq \psi \leq 0.6$ . . . . .	24
21	Cumulative Returns of Active Investment Strategy Following the C&D <sub>EGARCHSVI</sub> strategy for $0 \leq \psi \leq 1$ . . . . .	25
22	Cumulative Returns of Active Investment Strategy Following the C&D <sub>EGARCHSVI</sub> strategy for $0.45 \leq \psi \leq 0.6$ . . . . .	25

Table 1: SVI Descriptive Statistics

Variable	Statistic					
	Mean	Standard Deviation	Median	Skewness	Kurtosis	1 <sup>st</sup> Lag Autocorrelation
$SVI^{FTSE}$	2.764727	2.916147	2	8.9068	236.1216	0.575
$SVI^{SPX_1}$	11.8463	7.164055	10	3.135406	18.8146	0.869
$SVI^{SPX_2}$	9.723473	6.673175	8	3.064971	19.41453	0.669
$SVI^{SPX_{CPV}*}$	9.24238	4.948923	8	2.994608	31.55793	0.523
$SVI^{SPX_{CPV-US}*}$	10.22849	5.953334	9	3.050486	25.5173	0.583

Tabulated statistics were computed from all full-sample trading days except the ones with asterisks (\*) which were computed from full-CPV-sample trading days. Significant figures differ as per their origin in the R code.

Table 2: Descriptive Statistics

Variable		Statistic					
		Mean	Standard Deviation	Median	Skewness	Kurtosis	1 <sup>st</sup> Lag Autocorrelation
$R^{Index}$	$R^{FTSE}$	0.000131821	0.01169291	0.000534463	-0.01498459	8.390776	-0.029
	$R^{SPX}$	0.000311301	0.01142788	0.000660012	-0.1953126	11.30544	-0.109
$\Delta SVI^{Index}$	$\Delta SVI^{FTSE}$	0.5477989	2.347539	0	14.91342	495.2456	0.043
	$\Delta SVI^{SPX_1}$	0.00342827	3.660369	0	0.6474908	64.14817	-0.328
	$\Delta SVI^{SPX_2}$	1.288502	4.958929	1	1.75178	28.29457	-0.172
	$\Delta SVI^{SPX_{CPV}^*}$	1.026404	4.643211	1	0.8574528	46.73912	-0.224
	$\Delta SVI^{SPX_{CPV-US}^*}$	1.177238	5.090036	1	2.279915	39.23575	-0.186
$RV^{Index}$	$RV^{FTSE}$	0.009091193	0.005814697	0.0075211	3.733061	29.93447	0.725
	$RV^{SPX}$	0.007907957	0.00610196	0.006119621	3.653883	22.38065	0.823
$r_f^{Index}$	$r_f^{FTSE}$	5.510478x10 <sup>-05</sup>	0.002283866	3.954246x10 <sup>-05</sup>	0.05807592	2.712622	0.003
	$r_f^{SPX}$	-3.335806x10 <sup>-07</sup>	5.495562x10 <sup>-05</sup>	0	0.8408268	60.85758	0.171

All statistics were computed from all full-sample trading days except the ones with asterisks (\*) which were computed from full-CPV-sample trading days. Results were shown in a manner akin to CPV to aid readers wishing to compare results. Significant figures differ as per their origin in the R code.

Figure 1: Cumulative Returns of an Agent Investing as per Strategies with the SPX for  $\psi = 0.49$

This graph shows  $\mathcal{R}_{j,t}^{SPX_1}$  for the out-of-sample period - *i.e.*: for  $t$  in between 01/01/2005 and 13/03/2019. It clearly suggests that a cumulative Buy-and-Hold strategy is most beneficial.

Figure 2: Cumulative Returns of an Agent Investing as per Strategies with the SPX for  $\psi = 0.495$

This graph shows  $\mathcal{R}_{j,t}^{SPX_1}$  for the out-of-sample period - *i.e.*: for  $t$  in between 01/01/2005 and 13/03/2019. It clearly suggests that a cumulative Buy-and-Hold strategy is most beneficial.

Figure 3: Cumulative Returns of an Agent Investing as per Strategies with the SPX for  $\psi = 0.5$

This graph shows  $\mathcal{R}_{j,t}^{SPX_1}$  for the out-of-sample period - *i.e.*: for  $t$  in between 01/01/2005 and 13/03/2019. It clearly suggests that a cumulative Buy-and-Hold strategy is most beneficial.

Figure 4: Cumulative Returns of an Agent Investing as per Strategies with the SPX for  $\psi = 0.505$

This graph shows  $\mathcal{R}_{j,t}^{SPX_1}$  for the out-of-sample period - *i.e.*: for  $t$  in between 01/01/2005 and 13/03/2019. It clearly suggests that a cumulative Buy-and-Hold strategy is most beneficial.

Figure 5: Cumulative Returns of an Agent Investing as per Strategies with the SPX for  $\psi = 0.51$

This graph shows  $\mathcal{R}_{j,t}^{SPX_1}$  for the out-of-sample period - *i.e.*: for  $t$  in between 01/01/2005 and 13/03/2019. It clearly suggests that a cumulative Buy-and-Hold strategy is most beneficial.

Table 3: SPX<sub>CPV</sub> In-Sample Regression Coefficients

Model	AR Model Coefficients			Variance Model Coefficients				
	$C$	$\phi_1$	$\phi_2$	$c$	$\alpha$	$\beta$	$\gamma$	$\delta$

This tables shows coefficients estimated from models outlined in the dissertation under which are displayed their standard errors and p-values in brackets and square brackets respectively. Statistical-significance of the non-bracketed values (*i.e.* the coefficients) are to the CL of the difference between their attached square-bracketed values and one. Significant figures differ as per their origin in the R code.

This tables shows coefficients estimated from models outlined in the dissertation under which are displayed their standard errors and p-values in brackets and square brackets respectively. Statistical-significance of the non-bracketed values (*i.e.* the coefficients) are to the CL of the difference between their attached square-bracketed values and one. Significant figures differ as per their origin in the R code.

Figure 6: Cumulative Returns of an Agent Investing as per Strategies with the SPX as per the  $\Delta SVI_{CPV}$  data over the out-of-CPV-sample for  $\psi = 0.49$

This graph shows  $\mathcal{R}_{j,t}^{SPX_{CPV}}$  for the out-of-CPV-sample period.

Figure 7: Cumulative Returns of an Agent Investing as per Strategies with the SPX SPX as per the  $\Delta SVI_{CPV}$  data over the out-of-CPV-sample for  $\psi = 0.495$

This graph shows  $\mathcal{R}_{j,t}^{SPX_{CPV}}$  for the out-of-CPV-sample period.

Figure 8: Cumulative Returns of an Agent Investing as per Strategies with the SPX as per the  $\Delta SVI_{CPV}$  data over the out-of-CPV-sample for  $\psi = 0.5$

This graph shows  $\mathcal{R}_{j,t}^{SPX_{CPV}}$  for the out-of-CPV-sample period.

Figure 9: Cumulative Returns of an Agent Investing as per Strategies with the SPX as per the  $\Delta SVI_{CPV}$  data over the out-of-CPV-sample for  $\psi = 0.505$

This graph shows  $\mathcal{R}_{j,t}^{SPX_{CPV}}$  for the out-of-sample period.

Figure 10: Cumulative Returns of an Agent Investing as per Strategies with the SPX as per the  $\Delta SVI_{CPV}$  data over the out-of-CPV-sample for  $\psi = 0.51$

This graph shows  $\mathcal{R}_{j,t}^{SPX_{CPV}}$  for the out-of-CPV-sample period.

Table 5: SPX Out-of-Sample Recursive Variance Forecast (using  $\Delta SVI^{SPX_{CPV}}$ ) Error Statistics

$\hat{\sigma}_{t t-1}$ Model	Mean	Standard Deviation	RMSE	DM
GARCH	0.001602547	0.004116072	0.004416406	-13.51
GARCH-SVI <sup>SPX<sub>CPV</sub></sup>	0.0016737	0.004129915	0.004455542	[2.2x10 <sup>-16</sup> ]
GJRGARCH	0.001437398	0.003692315	0.00396167	-11.929
GJRGARCH-SVI <sup>SPX<sub>CPV</sub></sup>	0.001515589	0.003714896	0.0040116	[2.2x10 <sup>-16</sup> ]
EGARCH	0.001164601	0.003584217	0.003768115	-2.2602
EGARCH-SVI <sup>SPX<sub>CPV</sub></sup>	0.001465401	0.004769846	0.004989125	[0.01194]

Under DM test statistics are located their p-values in squared brackets; their alternative hypothesis is that the SVI-implementing model is less accurate than the SVI-free one. Significant figures differ as per their origin in the R code.

Table 6: SPX Out-of-Sample Positive Excess Return Probability Forecast (using  $\Delta SVI_{CPV}$ ) Error Statistics

$\hat{\sigma}_{t t-1}$ and $\hat{\mu}_{t t-1}$ Model	Mean	Standard Deviation	Brier Score	DM
GARCH	0.008349835	0.4990836	0.2490721	-0.86718
GARCH-SVI <sup>SPX<sub>CPV</sub></sup>	0.006548647	0.4991179	0.2490792	[0.807]
GJRGARCH	0.001995008	0.4988365	0.2487602	-2.1296
GJRGARCH-SVI <sup>SPX<sub>CPV</sub></sup>	0.003271621	0.4989303	0.2488605	[0.9834]
EGARCH	0.002367203	0.4988579	0.2487831	-1.3117
EGARCH-SVI <sup>SPX<sub>CPV</sub></sup>	0.001883716	0.4990035	0.2489263	[0.9051]

Under the DM test statistics are located their p-values in squared brackets; their alternative hypothesis is that the SVI-implementing model is more accurate than the SVI-free one. Significant figures differ as per their origin in the R code.
